Prepared .tla file tinyurl.com/tilia-file

1 TiLiA: Workflow Advice

- TiLiA files (.tla) must be opened **from within the app**, not by double-clicking them.
- Load media from a YouTube link or a local audio/video file, or open a pre-existing file such as the one prepared above.
- Start the video by **clicking on the embedded player once**; afterwards you can navigate in the GUI.
- **Save frequently** to avoid losing progress. Automatically saved backups are available via *File* → *Open Autosaves Folder*.
- Position the YouTube player conveniently, e.g. next to your analysis. Toolbar may be hidden if the window is too small.
- Get used to the **keyboard shortcuts** below for a smoother workflow.

Common keyboard shortcuts

Hierarchy timeline shortcuts	Action	Other timeline shortcuts	Action
s	Split component into two parts	m	Set a new marker
e	Merge adjacent components into one	h	Add harmony
g	Group components together	b	Add beat
c	Create child one level under the component		
Ctrl + ↑ / ↓	Change level of the components		
Enter	Open the inspector window		

Note: Marker, harmony, beat and split always apply to the current position of the **slider** - make sure it is where you want it.

2 Annotation Standard

You are free to use any label in TiLiA. However, a standardised annotation syntax and vocabulary has great advantages: it allows for parsing and evaluating analyses on a corpus level, and enforces analytical precision and completeness. For this workshop we recommend a simplified subset of the **LCMA form annotation standard** (currently in development).

Formal function | type

Formal functions can be traced to a temporal function on a certain level, e.g. basic idea ⇒ *beginning* (idea level); development ⇒ *middle* (section level). If no formal function is applicable, use a generic term like *phrase* or *unit* for the formal layer.

When a component is *realised as* a recognised formal template, the **type** follows the function after a pipe | (read “realised as”).

Material syntax

Assign a name to a component	P: primary_theme sentence ⇒ “This unit is called P. It is a primary theme, realised as a sentence.”
Reference a named component	closing_section [P] ⇒ “The closing section uses material from the primary theme (P).”
Combined	S: secondary_theme pd [P*] ⇒ “S is a secondary theme, realised as a period, built on abbreviated P material.”

Semantic modifications (may be combined; P is a placeholder for any assigned name):

[P]	inexact repeat	[P!]	exact repeat	[P~]	ornamented repeat	[P+]	extended repeat
[P*]	abbreviated repeat	[P**]	development	[P°]	tonally adjusted repeat		

3 Controlled Label Vocabulary

This is tiny label set for basic Caplinian Theme analysis. You can use either the full label or the abbreviation.

Theme-level functions		Theme-level types (Caplin)		Phrase-level functions		Idea-level functions	
primary_theme	pt	sentence	sent	presentation	pres	basic_idea	bi
transition	tr	period	pd	antecedent	ant	contrasting_idea	ci
secondary_theme	st	hybrid_1	hyb1	compound_basic_idea	cbi	fragmentation	frag
closing_theme	cls	hybrid_2	hyb2	cadential_phrase	cad	continuation_idea	conti
		hybrid_3	hyb3	continuation_phrase	cont	cadential_idea	cad
		hybrid_4	hyb4	consequent	cons		

4 Exercise: Encoding Analytical Claims

After becoming familiar with the basic mechanics of TiLiA and the annotation syntax, try to encode some of the analytical claims about the beginning of W. A. Mozart's String Quartet in G major, KV 387. Some of the claims are also indicated on the sheet music below, for orientation.

Mozart's Werke. von Serie 14, N° 14.

W. A. MOZART.

Köch. Verz. N° 387:

Primary Theme Continuation Phrase

Compound Basic Idea (2+2) Componirt im December 1782 zu Wien.

Allegro vivace assai. fragmentation (1+1)

Violino I. Violino II. Viola. Violoncello.

8 11 Transition

I: DC I: PAC

Your hierarchy timeline should have **at least three levels** and, as a whole, communicate the following analytical observations:

1. The primary theme is located in mm. 1–10.
2. This theme is *typologically realised* as a “Hybrid 3” (Caplin).
3. The presentation (mm. 1–4) is a compound basic idea, since it consists of two different ideas and does not end with a cadence, only “tonal closure”.
4. The continuation phrase (mm. 5–10) contains a continuation idea with fragmentation (mm. 5–6) and two cadential ideas (mm. 7-8, 9-10).
5. The second cadential idea is a more *embellished* and *tonally adjusted* version of the first.
6. The first cadential idea leads to a deceptive cadence (m. 8), the second to a perfect authentic cadence in the tonic key (m. 10).
7. The fragmenting continuation idea in mm. 5-6 references material from the cbi, namely m. 4.
8. The transition is located in mm. 11–25 and develops material from the primary theme.

Feel free to encode your own analytical claims as well, or try to delete and recreate some parts of the prepared
